Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: upon close review of the claims, the prior art, and applicant's remarks it appears that the allowance of claims 1, 2-24, and 25-27 are appropriate.

Referring to the claimed invention, U.S. Patent No. 5,216,434 by Fukumura discloses an antenna connection detection system for confirming the connections of two antennae to a radio receiver (see Abstract), comprising: a receiver having a first antenna connection port (Figure 1, 3) and a second antenna connection port (Figure 1, 4); a first antenna (Figure 1, 1) and a second antenna (Figure 1, 2); and a circuit via which the first and second antennae are in communication with the receiver (column 4, lines 11-23), wherein the receiver supplies a signal to the first antenna connection port and detects whether said signal is present at the second antenna connection port, thereby confirming that both the first and second antennae are connected to the radio receiver (column 4, line 51 – column 5, line 13).

U.S. Patent No. 6,252,551 by Noro et al disclose an antenna unit comprising: a first antenna element for receiving satellite broadcast transmissions and a second antenna element for receiving terrestrial broadcast transmissions; a switching means for selectively switching output of either a reception signal of the first antenna element or a reception signal of the second antenna element (see Abstract; Fig. 8; Fig. 11; col. 8, line 1 – col. 9, line 58; col. 12, line 63 – col. 14, line 10).

None of the prior art disclose confirming connections of two antennae to a radio receiver as shown in Figure 2 and as claimed in Claims 1, 10, and 18, and a voltage regulator being powered by a voltage signal, as shown in Figure 2 and as claimed in Claims 1, 10, 18, and 25.
